

## The Sooner We Start The Farther They'll Go

When something about your child seems unusual or worrisome, it's important to address your concerns as soon as possible. Warning signs are just that - warnings. They don't necessarily mean that there are problems. However, if you're concerned about your child there are steps you can take.

- Observe how your child is developing compared to children of the same age.
- If you have a concern about your child's development, a free screening may be arranged through your local school district or Child & Family Connections.

### About Early Intervention Services

Early Intervention services provided during the first three years of life may help children by

- Encouraging and supporting development
- Preventing diagnosed conditions from becoming more severe
- Improving the overall functioning of children who have delays or are at high risk of becoming developmentally delayed
- Providing families with support and information

### Early Intervention Services May Include:

- + Developmental screening and evaluation
- + Physical therapy, occupational therapy, speech therapy and developmental therapy
- + Parent support, education and training
- + Family and individual counseling
